

Omni Mounting Kit

AMO-100S

Tower Equipment Series

The MDSA omni antenna mounting kit is the result of cooperation of MDSA engineers with the “real tower guys”- riggers. This kit is designed specifically for MDSA’s high directional omni antennas and allows for the installation of the omni antennas within the required specification of +/- 0.25 degrees in the vertical plane.

Setting up an omni directional antenna requires adjusting the nuts on only three adjustment bolts. This job can be done by a rigger with an average skill with guaranteed good result. The mounting kit is made out of stainless steel, so it can be placed on even the most restrictive telecommunications towers.

Features

- Allows easy installation of MDSA omni antennas to within +/- 0.1 degrees of vertical
- Made of stainless steel
- Jumper cables go straight down without sideways stress to the connectors
- Supports different omni antenna types supplied by MDSA
- Easy to install on wide range of mast diameters and U-shape bolts
